

AYOTOMIWA OJO

PYTHON AND DJANGO DEVELOPER

Lagos, Nigeria | 09151855301 | ayotomiwa529@gmail.com | github.com/Lordt0m

PROFESSIONAL PROFILE

Self-taught Python and Django developer building practical web applications and backend systems. Focused on clear domain rules, transactional integrity, dependable data handling, automated testing, and documentation. Holds a B.A. in English and Literary Studies, supporting clear technical communication.

SELECTED PROJECTS

ShelfSum - Server-Rendered Inventory and Business Activity

Python 3.13 - Django 5.2 LTS - PostgreSQL - Neon - Render - GitHub Actions

Live demo: <https://shelfsum.onrender.com/> | Source: <https://github.com/Lordt0m/shelfsum>

- Built a Django application for Owner and Staff Member teams to record Products, Purchases, Sales, Expenses, and Stock Adjustments with server-enforced permissions and Business-scoped lookups.
- Combined a directly readable Stock on Hand value with an immutable Stock Movement ledger, explicit transactional services, and reversal workflows so every change remains traceable.
- Verified 271 automated tests at the accepted baseline; hosted PostgreSQL CI runs the three concurrency tests without skips. Deployed on Render with Neon PostgreSQL and WhiteNoise.

Credence - Deterministic Cashbook Validation and Financial Summary

Python 3.13 Standard Library - pytest - GitHub Actions - CSV - JSON

Source: <https://github.com/Lordt0m/credence>

- Built a local command-line tool with zero runtime package dependencies that validates a strict seven-column CSV contract and preserves physical source-line numbers in diagnostics.
- Implemented row-level error accumulation, case-insensitive whole-file duplicate rejection, and exact Decimal calculations for income, expenses, and net cash movement in NGN.
- Generates three deterministic reports through staging, collision refusal, and best-effort rollback for handled publication errors; verified by 35 tests in Ubuntu and Windows CI.

CORE TECHNICAL SKILLS

Python: Python 3.13, standard library, Decimal, CLI parsing, pytest, unittest, CSV and JSON.

Django: Django 5.2 LTS, server-rendered views, authentication, permissions, forms, CSRF protection, integration testing.

SQL and PostgreSQL: Relational modelling, transactions, integrity constraints, migrations, indexing, Neon.

HTML and CSS: Semantic markup, responsive layouts, accessibility landmarks, visible focus, progressive enhancement.

Git and GitHub: Version control, focused commits, issue-led delivery, release documentation, and GitHub Actions CI.

EDUCATION

B.A. English and Literary Studies - Federal University Oye-Ekiti | Completed October 2023

CERTIFICATIONS

- Certificate of National Service - National Youth Service Corps (NYSC), February 2025
- Certificate - Nigerian Red Cross Society
